RE: EU Regulation number 217/2020
Classification, labelling and packaging of substances
and mixtures containing Titanium Dioxide

According to the current state of ongoing discussions
we believe that the regulation does not apply to us
for the following reasons:

- Titanium dioxide is contained only in some masterbatches,
but the quantity, in coloured products, is in any case less 1%
- our articles are in solid state,
so not subjected to classification, labelling and packaging
requested by the regulation n.1272/2008,
amended by regulation EU 217/2020

We trust to have informed you hereby sufficiently
and we remain at your disposal for any info you might
require.

Best regards.
